## PEAK HAWKSIGHT<sup>™</sup> OPTICS CAPABILITIES

## Company Data

- Founded: 2016
- Headquarters: Peak Nano Optics, LLC 8190 Roll & Hold Parkway Macedonia, OH 44056 216-750-8673
- Web: peaknano.com
- Email: PNOSales@peaknano.com
- Federal Tax ID: 85-0700734
- DUNS: 117678034
- Unique Entity ID: 82-4236128
- CAGE/NCAGE: 70PU4
- NAICS Codes: 571700

#### **Contract Vehicles**

# PEAK HAWKSIGHT<sup>™</sup> OPTICS CAPABILITIES

## **Peak Mission**

Our mission is to "develop nanoscale technologies that deliver macro-scale benefits." Peak HawkSight optics are 100% U.S.-engineered and manufactured, with no reliance on China for our supply chain. Developing technology is critical for our nation's innovation, but a safe and secure supply chain is required to ensure national security.

## **Peak Overview**

Peak Nano was founded in 2016 to leverage revolutionary advances in nanotechnology for defense, energy, and communications. The foundational research for NanoPlex<sup>™</sup> was a collaboration of Case Western Reserve University, DARPA, the Naval Research Laboratory (NRL), and grants from the National Science Foundation. Peak uses NanoPlex nanolayered metamaterials, not glass, to make our lightweight, high-performance optics.

## HawkSight LGRIN Optics

HawkSight optics use our HawkAI<sup>™</sup> design platform to create lightweight, high-performance optics based on Layered Gradient Refractive Index (LGRIN) technology. Peak creates hybrid optics systems that blend the advances of LGRIN with the proven reliability of glass to create evolutionary advances that deliver an overmatch advantage for our warfighters.

## **Unparalleled Optics Performance with LGRIN Technology**

### 2X THINNER OPTICS

Our LGIRN technology enables Peak to create optics up to 2x thinner than traditional glass optics.

#### **50% LIGHTER OPTICS**

Our optics leverages Peak's patented NanoPlex metamaterials to create up to 50% lighter optics than traditional glass-based optics.

#### HIGH-RESOLUTION ACROSS THE FOV

Peak's LGRIN technology provides complete focus and high resolution across the field of view (FOV) unlike some glass optics.

#### WIDER FIELD OF VIEW

HawkSight's LGRIN enables us to design for wider fields of view to provide better performance and lighter weight than glass optics.

#### ENVIRONMENTAL SAFETY

Using NanoPlex metamaterials for LGRIN optics reduces the use of glass optics made with lead, nickel, and other hazardous substances.

(Č

#### OPTIMIZED COLOR RESOLUTION

LGRIN technology provides superior color resolution and management to make images sharper and more accurate.

## HawkSight LGRIN Optics

 Advanced Metamaterials -HawkSight optics are made from Peak's NanoPlex metamaterial.

## LGRIN Technology - LGRIN

 reflects over 20 years of efforts by researchers who jointly developed the technology from DARPA, NRL, and Case Western Reserve University.

## Al-Based Design - Our HawkAl

 design software enables Peak to reduce design time from years to months, creating a sustainable competitive advantage.

## Lightweight Optics - HawkAl

 designed lenses are 2x thinner and up to 50% lighter than traditional glass optics.

### High Performance - HawkAl

 designed lenses optimize optics performance across the field of view, color clarity, and distance.

## Patented Technology - Over 20

- global patents protect Peak's technology.

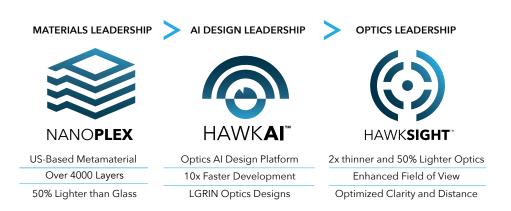

## U.S. Made - HawkSight optics

 and our NanoPlex metamaterials are designed and manufactured in the U.S.

## Secure Supply Chain - Peak uses

 an allied-nation supply chain with no resources or materials from China.

## HAWKSIGHT OPTICS U.S. DESIGN AND MANUFACTURING

## **Peak Optics Capabilities**

Peak has created a new way to design lightweight, high-performance optics, starting with our NanoPlex metamaterial, which is up to 50% lighter than glass. Next, we use our HawkAI design software to optimize the performance of our designs and consolidate the optics system. Finally, we produce new optics for the most demanding applications.

## **Night Vision**

HawkSight optics give warfighters a significant advantage, shifting the night vision paradigm from glass-only optics to hybrid LGRIN night vision systems that are lighter, higher performing, and more compact than traditional glass-only optics. We reduce soldier burden (neck strain, eye box) and improve target identification, situational awareness, and operational tempo with wider FOV, increased clarity, and extended target identification.

## **Fire Control**

Peak's fire control systems have delivered lightweight optics systems emphasizing portability and ease of deployment to adapt to various terrains and operational needs. Peak ensures that our fire control optics and systems are modular, allowing for easy upgrades with emerging technologies. By leveraging existing form factors, we reduce setup time, enabling faster responses and adaptability in combat situations.

## **Unmanned Aircraft Systems (UAS)**

Peak's UAS designs will be able to reduce weight and enhance the preferences of UAS systems to increase operation time, and deployment stance and provide enhanced intelligence and targeting capabilities.
